DESCRIPTION OF SSRMP WORKING GROUP

Working group name: Stereotactic Convergent Beam Irradiation

Chair person: Andreas Mack

Aims and roadmap:

1. Getting to know all the different stereotactic techniques available and used in Switzerland
- done (there are presentations and protocols of all visited sites)
2. Visiting all the sites to get insights in the technologies and all relevant QA
- done (there are documents and protocols of all used specific QA)
3. Creation of a recommendation
- still on process (we have collected material from other societies and working groups and will put together a draft during the next month)

Anticipated results: Report Recommendation Other:

Science relevance: maybe in the long term – we are considering a comparison among all the techniques.

Professional relevance: The collected data distributed by the working group (protocols, presentations) may be helpful for anyone to start in the field of stereotactic irradiations.

Educational relevance: Since we addressed all different techniques used, there is an educational relevance given.

Start date: 1. meeting may 2011 End date: ??????
